```

I. Biochem. Parasitol. '48:173-184(1991).
FUNCTION: Has an integral role during the infection of macropha in the mammalian host.
CATALYTIC ACTIVITY: Preference for hydrophobic residues at Pl a Pl and basic residues at P2 and P3'. A model nonapeptide is cleaved at -Ala-Tyr-|-Leu-Lys-Lys-|
COPACTOR: Binds 1 zinc ion per subunit (By similarity).
SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
SIMILARITY: Belongs to peptidase family M8.

9 8

infection of macrophages

glycoprotein

MEDLINE=92107220; SEQUENCE FROM N.A.

PubMed=1762629;

Leishmania donovani. Eukaryota; Euglenozo

Euglenozoa;

Kinetoplastida; Trypanosomatidae; Leishmania.

(Promastigote

surface

surface protease)

endopeptidase)

                                                                                                                                                                                                                                 FUNCTION: Has an integral role during the infection of macropha, in the mammalian host.
In the mammalian host.
CATALYTIC ACTIVITY: Preference for hydrophobic residues at P1 are P1' and basic residues at P2 and P3'. A model nonapeptide is cleaved at -Ala-Tyr-|-Leu-Lys-Lys-.
COFACTOR: Binds 1 zinc ion per subunit (By similarity).
SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
                                                                                                                                                                                                                 SUBCELLULAR SIMILARITY:

CATALYTIC ACTIVITY: Preference for hydrophobic residues at P1 and P1 and basic residues at P2 and P3. A model nonapeptide is cleaved at -A1a-Tyr-|-Leu-Lys-Lys-.

COFACTOR: Binds 1 zinc ion per subunit.

SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor. PTM: THE PHOSPHATIOYLINOSITOL MOIETY OF THE GPI-ANCHOR CONTAINS A FULLY SATURATED, UNBRANCHED 1-O-ALKT CHAIN (MAINIY C24:0) AND A MIXTURE OF FULLY SATURATED UNBRANCHED 2-O-ACYL CHAINS (C12:0, C14:0, C16:0, AND C18:0).

SIMILARITY: Belongs to peptidase family M8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            6:1035-1046(1998).

The present invention describes a recombinant agfA gené (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for cellciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are usually strong against the inserted epitope, and hybrid fimbriae are easy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC copy of that gene, and (4) eliciting an immune response in an animal.

CC comprising separating an amino acid polymer comprising a recombinant AgfA

CC protein containing a replacement segment or segments of foreign amino

CC acid sequence or sequences grown on a Salmonella, E. coli or

CC Enterobacteriaceae host cell, from the host cell and introducing the

CC polymer into the animal in conjunction with a carrier or diluent. (I) is

CC useful for the expression of recombinant AgfA protein which is useful for

CC eliciting an immune response in an animal. In a fimbrial presentation

CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the

CC immunogenicity and adhesion properties relevant for an efficient live

CC vaccine, the carrier fimbrial subunit proteins are usually strong

CC immunogens, which may be important for directing an immune response

CC against the inserted epitope, and hybrid fimbriae are easy and

CC inexpensive to purify in large amount. The present sequence is given in

CC the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEFI7/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CSgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene back into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                       Salmonella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   acid sequence or sequences grown on a Salmonella, B. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) useful for the expression of recombinant AgfA protein which is useful eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              directing recombination of a recombinant gene into the chromosome of the Chomologous species; (3) directing recombinant gene into the chromosome of the chomologous species, replacing the native back into the chromosome of the homologous species, replacing the native CC copy of that gene; and (4) eliciting an immune response in an animal. CC comprising separating a maino acid polymer comprising a recombinant AgfA CC protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the CC polymer into the animal in conjunction with a carrier or diluent. (1) is CC cuseful for the expression of recombinant AgfA protein which is useful for CC eliciting an immune response in an animal. In a fimbrial presentation CC system the heterologous antigens are presented in high numbers (up to CC 00,000 copies/cell), the hybrid fimbrian protein possesses both the CC immunogenicity and adhesion properties relevant for an efficient live communicates, the carrier finbrial subunit proteins are usually strong communicates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escharichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
                                                                                                                                                                                                                                                                                                                                         AAW23570 standard; protein; 151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given the argument of the present sequence is given.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Page 135; 139pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    exemplification of the present invention

The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)

(1) is ccid sequence animal in conjunction with a carrier or diluent. (1) is ccid useful for the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation conjunction with a carrier or diluent (1) is ccid useful for the heterologous antigens are presented in high numbers (up to CC oppose) (cell), the hybrid fimbria protein possesses both the carrier fimbrial subunit proteins are usually strong communogens, which may be important for directing an immune response consists the inserted epitope, and hybrid fimbriae are easy and consists the inserted epitope, and hybrid fimbriae are given in the community of the present segments is given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches 134;

                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                       directing recombination of a recombinant gene into the chromosome of the chomologous species; (3) directing recombinant gene of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal. CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to $10,000 copies/cell), the hybrid fimbrin protein possesses both the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for a fimbrial an immune response

CC directing recombination of a recombinant gene into the chromosome of the CC homologous species; (3) directing recombination of a recombinant gene

CC back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal,

CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid golymer comprising a recombinant AgfA conditions of sequence grown on a Salmonella, E. coli or compose in a salmonella, E. coli or conjumer into the animal in conjunction with a carrier or diluent. (I) is cusful for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to compose) cell), the hybrid fimbrin protein possesses both the carrier fimbrial subunit protein possesses both the carrier fimbrial subunit proteins are usually strong conjunction which are usually strong conjunction the inserted epitope, and hybrid fimbrine are easy and conversed the inserted epitope, and hybrid fimbriae are easy and conversed to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant agfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the
                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 137; 139pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
       directing recombination of a recombinant gene into the chromosome of the chomologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein seems both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response
                                                                                                                                                                                                                                                                                                                                The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEFIT/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 137; 139pp; English.

(I) useful for the expression of recombinant AgfA protein which is useful eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Salmonella enteritidis.

The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign D sequence which encodes a foreign epitope or antigen. Also describe

described

Disclosure; Page 138; 139pp; English.

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            88888888888888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)

CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene cc back into the chromosome of the homologous species, replacing the native cc copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or coll sequence or sequences grown on a Salmonella, E. coli or collymer into the animal in conjunction with a carrier or diluent. (I) is cuseful for the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation cc system the heterologous antigens are presented in high numbers (up to collow the carrier fimbrial subunit protein possesses both the cimmunogenicity and adhesion properties relevant for an efficient live creatine, the carrier fimbrial subunit proteins are usually strong communogens, which may be important for directing an immune response consists the inserted epitope, and hybrid fimbriae are easy and consists the inserted epitope, and hybrid fimbriae are easy and consists the order of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

CC Sequent of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended (CC assembly system of strains of Salmonella, Bscherichia coli and CC Enterobacteriaceae for the production of fimbriae comprising recombinant CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) clirecting recombination of a recombination of a recombination of the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene into the chromosome of the chromosome of the homologous species; (a) directing an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or containing an immune response in an animal. In a fimbrial presentation for extern the host cell and introducing the sequence of the expression of recombinant AgfA protein which is useful for extern the host cell and introducing the security of the sequence of the animal in conjunction with a carrier or diluent. (1) is useful for the expression of recombinant AgfA protein which is useful for extern the heterologous and animal. In a fimbrial presentation
                                                                                      system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in inexpensive to purify in large amount.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N-PSDB; AAC64624.

                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ঠ
                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                      श
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AgfA, CegA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinate gene into the chromosome of the homologous species; (3) directing recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (1) is useful for the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and context of the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The peptide antibody is useful for treating a bacterial infection in a human or animal or in the manufacture of a medicament for the prophylactic treatment of a bacterial infection, such as Escherichia coli, Salmon or Shigella infection. The peptide that is immobilized on a solid su is also useful as a reagent for determining the ability of a plasma protein to bind to bacteria. The present sequence represents an E. c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated peptide capable of binding a mammalian plasma prouseful in the manufacture of a medicament for the prevention treatment of a bacterial infection, such as Escherichia coli, or Shigella infections.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score
